# Iris Wei

Seattle, WA 98121
206-883-1009 | iris333wei@gmail.com

## SUMMARY

Senior Software Engineer and startup Co-Founder with 8+ years of experience building AI-powered products and large-scale backend and full-stack platforms. Co-founded SproutCue and lead product engineering across web, iOS, and Android. Previously delivered high-impact systems at Google and Snap that improved automation, reliability, development speed, and operating cost.

## SKILLS

| | |
|---|---|
| **Languages** | Java, Kotlin, Python, Scala, SQL, JavaScript/TypeScript, HTML/CSS |
| **AI Engineering** | OpenAI Responses API, GPT Image API, multimodal AI, prompt engineering, structured outputs, AI safety workflows |
| **Platforms** | React, Expo/React Native, Supabase/PostgreSQL, Spanner, DynamoDB, Spark, Hadoop, Docker, Kubernetes, AWS, Git |

## PROFESSIONAL EXPERIENCE

**Co-Founder |** SproutCue Inc., Seattle, WA — Apr 2026 - Present

- Built a cross-platform family companion for web, iOS, and Android that helps parents discover local activities, organize playdates, and create personalized developmental content for young children.
- Developed an AI Play Studio for personalized picture books, practice stories, and toy-based play ideas; early testing produced 24 personalized AI creations and 59 completed picture-book pages.
- Designed secure, production-oriented infrastructure with Supabase Auth, row-level security, private photo storage, asynchronous AI jobs, push notifications, 37 API route modules, and 233 passing automated tests.

**Senior Software Engineer |** Google LLC, Seattle, WA — Feb 2020 - Oct 2025

- Founding member of Unified Support Service; built an AI-powered User Journey Service using domain classification and intent detection, achieving an 87% user deflection rate.
- Designed semantic search that increased long click-through rate by 3.75% and successful support-query resolution by 2.3%.
- Pioneered Flow Maker, modernizing legacy workflow development and reducing development time by 40%, saving $1.6M annually.
- Led migration of 3 event-driven components and 49 local events to platform models, increasing team velocity by 55%; re-architected compatibility tests to cut runtime from 20 minutes to 5 minutes.

**Software Engineer |** Snap Inc., Seattle, WA — Mar 2018 - Feb 2020

- Built core APIs and a React/DynamoDB console for BOLT, Snapchat's media storage and delivery platform, reducing storage and bandwidth costs by $350K annually.
- Migrated 90% of on-demand bandwidth - approximately 600 TB per week - to BOLT and released an upload tool used by 10+ teams.

**R&D; Engineer Intern |** Tupl Inc., Bellevue, WA — Jun 2017 - Dec 2017

- Developed APIs and Spark/Scala/HBase data utilities for telecom KPI preprocessing and station analysis.

## EDUCATION

**University of Washington** - B.S., Electrical Engineering — 2013 - 2017

Dean's List (10 quarters) | CoMotion Mary Gates Scholarship (2016)
